Projects Version 2

Business Application:

For the second version of your application

- Add data of 3 related records to your application.
- Convert your header to a separate function.
- Add functions (with appropriate input parameters and return type) against each menu options.
- Add helper functions like “Press any key to continue…”, and “Press a specific key to exit the application…”
- Make the application stop its execution once a key is pressed.

Example:

```
************************************************************

Game Development:

For the version 2.

We will be drawing 1 complete player character and 3 enemy characters.

- Draw complete character of the player.
- Player will moves with the arrow keys within boundaries.
- Code 3 descriptive enemies moving in their lane. One horizontally, one vertically and one horizontally. Once the enemy reaches the boundary, it starts from its starting location again.

Optional:

- Check how to make the collision detection for all coordinates around the player.
